Western SARE is supported by the National Institute for Food and Agriculture and the U.S. Department of Agriculture. The Western Region SARE program is hosted at Utah State University, and the Western Region SARE PDP program is hosted by the University of Wyoming.

MARKETING AND DISTRIBUTION

STRENGTHENING AGRICULTURE'S INFRASTRUCTURE

ADDING VALUE, BREAKING DOWN BARRIERS, INCREASING PROFITS

Larry Thompson, left, a grower and marketer from Damascus, OR educates participants about his farm's practices.

those with some exposure have limited experience and often work in isolation.

Providing workshops that give agricultural professionals hands-on experience and training could help to fill in knowledge gaps and foster more encouragement of successful alternative marketing.

Objectives

1. Increase workshop participants' knowledge of, and improve their attitudes toward, alternative marketing approaches and distribution channels
2. Provide workshop participants with a set of skills that will enable them to deliver engaging outreach programs to producers considering these enterprises
3. Develop a user guide to existing, underutilized alternative marketing

resources and an educational design template, both available electronically

Actions

Portland, Oregon, which has a long and successful history of innovations in food marketing, was selected as the ideal setting to conduct two three-day hands-on workshops. Participants were selected through an application process that enlisted professionals representing a wide range of ag support organizations, including extension, NRCS and other USDA agencies, state departments of agriculture and NGOs.

The first workshop, in September 2006, attracted 16 participants from eight states. The second, in September 2007 (not an extension but a replicate of the first), was

Situation

In the face of globalizing agricultural marketing systems, many small and medium farms and ranches are turning to alternative marketing approaches, all of which carry elements of both risk and promise. Among these approaches are:

- Farmers markets
- CSA (community supported agriculture) farms
- Direct sales to restaurants, institutions and retail stores
- Value-added production
- Product differentiation by location (buy local campaigns)
- Product differentiation by method (for example, eco-labels)

While many agricultural professionals are ideally positioned to play key roles in exploiting these potential marketing approaches, many continue their traditional focus on production issues. And

Professional Development Program Grant

Title: Hands-On Workshops: Alternative Marketing Approaches and Distribution Channels

Project Number: EW06-012

Project Coordinator:

Larry Lev

Professor and Extension Economist
Oregon State University
Dept. of Agricultural and Resource Economics
Ballard Extension Hall 221C
Corvallis, OR 97331-3601
(541) 737-1417

Amount Funded: \$60,000

The goal of Western SARE is to foster sustainability through grants that enable cutting-edge research and education to open windows of sustainability across the West.

SARE's vision is an enduring American agriculture of the highest quality. This agriculture is profitable, protects the nation's land and water and is a force for a rewarding way of life for farmers and ranchers whose quality products and operations sustain their communities and society.

SARE's mission is to advance — to the whole of American agriculture — innovations that improve profitability, stewardship and quality of life by investing in groundbreaking research and education.

MARKETING AND DISTRIBUTION

attended by 16 participants from eight states. Combined, the workshops included attendees from 11 states.

Before each workshop, project coordinators distributed to participants a packet of 11 resource materials, explaining how each could be integrated into educational programming. Topics included small farm management, direct marketing, sustainable and certified production, Rapid Market Assessment, farmers markets, certification and labeling and profiles of innovative farm marketers.

Participants were given pre-workshop homework assignments two weeks ahead, prompting them to visit via the Internet nearly 20 people and institutions to be featured during the three days of the workshops.

The workshop agenda included visits to farms and farmers markets, panels and presentations, experience with Rapid Market Assessment and daily debriefing sessions to focus on what was learned and observed.

Outcomes and Impacts

Surveys were conducted pre- and immediate-post workshop to measure changes in attitude and understanding and six months after the workshop to measure changes in activities conducted.

As a result of the workshops, all participants reported an increase in enthusiasm for working on the topic of alternative marketing systems and in their knowledge of different alternatives. This increase is particularly significant because many participants had been more focused on production than on marketing. They also expressed a greater appreciation for the breadth and complexity of the

Participants engaged in a debriefing exercise at the end of each day, and learned from people like Shari Raider of Sauvie Island Organics, below center.

food systems they observed.

The post-conference survey showed that:

- 12 of the 32 participants said that they had made use of the quantitative and qualitative research methods demonstrated during the workshop
- 15 had made use of the materials in educational workshops they had subsequently designed and presented
- 19 had drawn on other workshop participants in the six months after the workshop
- 17 said the workshop inspired them to search

and network with others in their home region

Potential Contributions

Local and regional marketing systems are more complex than most agricultural professionals and producers recognize. Well organized educational explorations of these systems serve a vital role in leading to their improvement.

Specific tools such as Rapid Market Assessment of farmers markets and farmer-chef connections can be easily adapted for use in other geographic regions. All activities that facilitate networking and easier exchange of information are also important.
